Summary

Data-driven Business Intelligence Analyst with 8+ years of experience bridging data, technology, and business strategy through scalable reporting solutions and analytics platforms. Skilled at transforming complex datasets into intuitive reporting tools that improve organizational visibility and support informed decision-making. Combines strong technical expertise with a collaborative approach to solving business problems through practical analytics solutions.

Work Experience

Data Wrangler
John Deere - Sep '22 to Present

ExpertConnect (EC)

- Optimized data model structure, reducing dashboard load times by 97% while supporting datasets exceeding 6 million new records annually
- Led implementation of multilingual support in dashboards, expanding accessibility and removing barriers for over 12 languages
- Own and continuously optimize an analytics platform generating 7,500+ monthly views and enabling dealers to make timely customer support decisions
- Partner with multiple product teams to integrate disparate datasets into a unified reporting solution used for performance tracking and planning
- Present technical dashboard updates, roadmap initiatives, and analytical insights to business and technical stakeholders, driving adoption of reporting solutions

Enterprise Aftermarket Data & Analytics (EADA)

- Recognized with 2023 John Deere President's Award for contributions to the Enterprise Aftermarket Data and Analytics organization
- Unified diagnostic performance metrics that existed across multiple datasets and consolidated into a singular dashboard that tracked incentive goals
- Develop and enhance a metrics dashboard integrating 6 key business functions used to monitor contributed sales performance across the enterprise
- Modify existing and produce new aftermarket program incentives to promote and generate millions in sales annually
- Mentor team members on dashboard development, DAX optimization, and reporting best practices

Business Intelligence Analyst
AgriSync (Acquired by John Deere) - Jun '21 to Sep '22

- Revamped existing Insights dashboard, improving visual layouts, data model structure, and DAX/Power Query performance
- Migrated reporting from Dremio to Amazon Athena, recreating data models, visuals, and DAX calculations in Power BI
- Developed Usage dashboard that tracked end-user efficiency in addition to annual goals and metrics
